PROFESSIONAL SUMMARY

Software engineer with experience building and shipping production systems, including an order-tracking system handling **~10K orders per day** and a migration pipeline for **5M+ customer records**.

EXPERIENCE

Fynd - Software Development Engineer (SDE) Intern

November 2025 - Present

- Independently built and deployed a Node.js migration pipeline for **5M+ customer profiles, addresses, and reward balances**, allowing existing users to retain their accounts on the new platform. Streamed CSV data from AWS S3 with chunked concurrency, validation, duplicate handling, API rate-limit controls, retries, and GCS archiving.
- Built and deployed a serverless order-tracking system processing **~10K orders per day**. Every 1–2 minutes, a Node.js job reads active orders from PostgreSQL-backed tables, polls external status APIs concurrently, updates customer-facing tracking data, and triggers emails and notifications on status changes.
- Built and maintained the complete customer email flow across the order lifecycle, converting Figma designs into dynamic templates and generating order-specific content through JavaScript and webhooks. Automated other recurring tasks, including a daily pipeline that exports customer and order data as CSV files to AWS S3.
- Contributed production code across **4 projects**. In separate projects, built a delivery-partner assignment extension that calls the configured partner API after order placement, and a refund extension that moves eligible orders into the platform's refund state to trigger downstream processing. Raised PRs through Azure Repos, deployed the serverless components, and trained L1 support to operate the automations and data pipelines.

TECHNICAL SKILLS

Languages:	JavaScript, TypeScript, Java, C, SQL
Frameworks:	Node.js, Express.js, React, Next.js
Systems / APIs:	REST APIs, API Integrations, Serverless Systems, Scheduled Jobs, Data Pipelines, Node.js Streams, Asynchronous and Concurrent Processing, Rate Limiting, Retry Strategies, Authentication/JWT
Data / Cloud:	PostgreSQL, MongoDB, Redis, AWS S3, GCS, Cloudflare Workers
DevOps / Tools:	Docker, CI/CD, Git, GitHub, Azure Repos, Linux CLI, Postman

ENGINEERING FOCUS

- Production Systems
- Production Debugging
- Concurrency & Scale
- Failure Handling
- System Design

EDUCATION

Terna Engineering College, University of Mumbai

May 2026

Bachelor of Engineering (B.E) - Computer Engineering | CGPA: 7.04

Related Coursework: Data Structures & Algorithms; Operating Systems; DBMS; Computer Networks; Artificial Intelligence; Object-Oriented Programming.

ENGINEERING HIGHLIGHTS

- System Design:** Familiar with trade-offs around scalability, concurrency, rate limiting, retries, state transitions, and failure recovery through production work and continued study.
- AI-Assisted Development:** Comfortable using AI to accelerate code comprehension, implementation, debugging, and documentation, while reviewing and validating outputs before integration.
- Problem Solving & Leadership:** Solved 350+ DSA problems with peak ratings of **1529** (LeetCode), **1463** (CodeChef), and **1053** (Codeforces); led a 4-member team that delivered 3 full-stack projects.

PROJECTS

VoltPay - Peer-to-Peer Payment System | [Link](#)

Node.js, PostgreSQL, Prisma, Docker

P2P payment flow using ACID transactions and a separate bank-webhook service for consistent balance updates.

Madhyam - AI Publishing Platform | [Link](#)

TypeScript, React, Cloudflare Workers, Gemini API

Edge-deployed publishing platform with Gemini-assisted draft generation.

TaskFlow - Task Management Application | [Link](#)

React, Node.js/Express, MongoDB, REST APIs

MERN task manager with category views, and REST-backed MongoDB persistence.
